

# Collaboration in personal success

Collaboration is an essential part of personal success. The graph below shows the average individual and group score in an assignment that asks students to individually rank different items after a crash landing on how useful they would be and then asks students to do the same while in a group. These rankings are then compared to the ideas of NASA, and a rating based on how far they were away from NASA’s order is created, with 0 being perfect and 72 being the worst possible score.

The two bars below show the average score of a group of 23 students and are split into the average score while ranking alone and ranking with a group. The bars show that the average of personal ratings is almost 14 points higher than the group score average. This difference indicates that most of the students performed better while in a group, being able to value everyone’s ideas and opinions.
